AWS APN Ambassador

Demo

Prerequisites

Create Project
& Dataset

Exploring & Preparing
Dataset

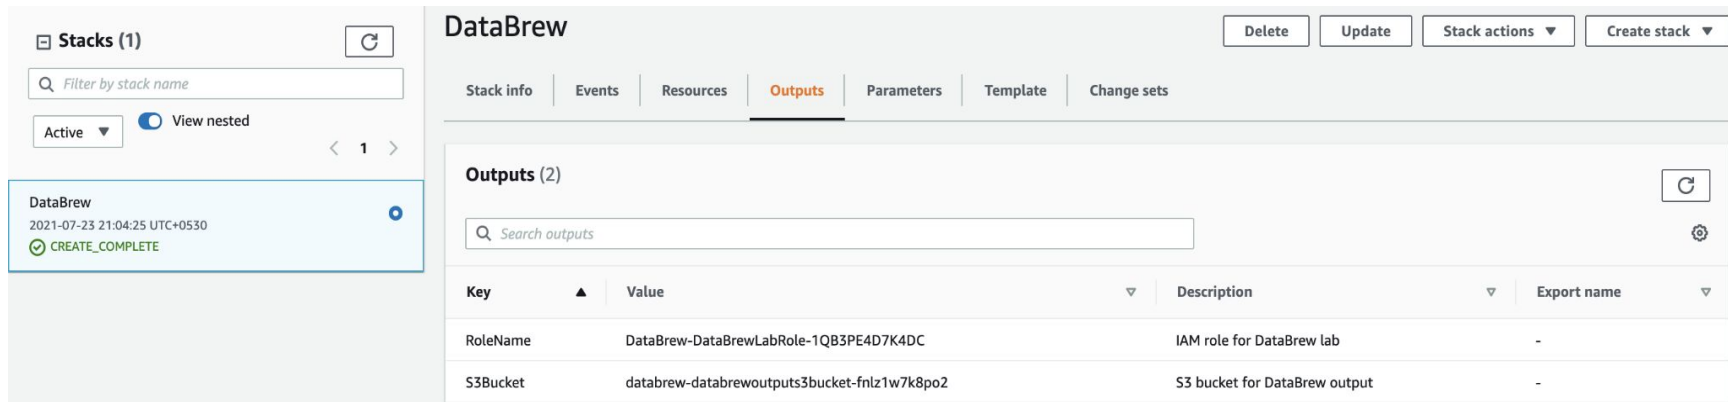

Creating a
DataBrew job

Viewing data
lineage

Prerequisites

- Download the [dataset](#) from this link and upload it to the S3 bucket
- Download the [cloudformation template](#) from this link and Deploy it
- Once the Cloudformation stack is deployed successfully please capture the values for RoleName and S3Bucket details

The screenshot displays the AWS CloudFormation console interface. On the left, the 'Stacks (1)' sidebar shows a single stack named 'DataBrew' with a status of 'CREATE_COMPLETE' and a timestamp of '2021-07-23 21:04:25 UTC+0530'. The main panel is titled 'DataBrew' and features tabs for 'Stack info', 'Events', 'Resources', 'Outputs', 'Parameters', 'Template', and 'Change sets'. The 'Outputs' tab is selected, showing 'Outputs (2)'. A search bar for outputs is present. Below it, a table lists the stack's outputs:

Key	Value	Description	Export name
RoleName	DataBrew-DataBrewLabRole-1QB3PE4D7K4DC	IAM role for DataBrew lab	-
S3Bucket	databrew-databrewoutputs3bucket-fnlz1w7k8po2	S3 bucket for DataBrew output	-

Creating a project

- Navigate to the AWS Glue DataBrew service
- On the DataBrew console, select Projects
- Click Create project
- In the Project details section, enter covid-states-daily as the project name

Create project [Info](#)

Project details

Project name

The project name must contain 1-255 characters. Valid characters are alphanumeric (A-Z, a-z, 0-9), hyphen (-), period (.), and space.

Recipe details [Info](#)

Data cleaning steps in DataBrew are stored as a recipe. A recipe is connected to a project by default. An existing recipe with no associated project could also be applied to a project.

Attached recipe

Create new recipe ▼

Recipe name

The recipe name must contain 1-255 characters. Valid characters are alphanumeric (A-Z, a-z, 0-9), hyphen (-), period (.), and space.

☐ Import steps from recipe

Import recipe steps from an existing recipe into your project. The existing recipe that you chose will not be edited.

Creating a dataset

- In the Select a dataset section, select New dataset and enter covid-states-daily-stats
- In the Connect to a new dataset section, select Amazon S3 under “Data lake/data store” and Enter the S3 path. Leave the default configuration values
- In the Permissions section, select the role DataBrew-DataBrewLabRole--xxxxx from the drop-down list
- Click Create project

Connect to new dataset [Info](#)

Creating a dataset

- Glue DataBrew will create the project, this may take a few minutes.

The screenshot displays the Glue DataBrew interface for a dataset named 'covid-states-daily'. The top navigation bar includes a 'Create job' button and links for 'LINEAGE' and 'ACTIONS'. Below the dataset name, it shows 'Dataset: covid-states-daily' and 'Sample: First n sample (500 rows)'. A toolbar with various data manipulation icons is visible, including 'UNDO', 'REDO', 'FILTER', 'COLUMN', 'FORMAT', 'CLEAN', 'EXTRACT', 'MISSING', 'INVALID', 'DUPLICATES', 'SPLIT', 'MERGE', 'CREATE', 'FUNCTIONS', 'UNNEST', 'PIVOT', 'GROUP', 'JOIN', 'UNION', 'TEXT', 'SCALE', 'MAPPING', and 'ENCODE'. The main workspace shows a 'Viewing' tab with '55 columns' and '500 rows'. A modal dialog is centered on the screen, featuring a rocket icon and the text: 'Your session will be ready soon! Initiating session'. Below this text is a progress bar showing 17% completion. At the bottom of the modal, it states: 'Your session will take about a minute to be ready. Once ready there will be no additional load time.' On the right side, the 'Recipe (0)' panel is visible, showing a 'covid-states-daily-recipe' as the 'Working version'. Below the recipe name is an icon representing a recipe and the text: 'Build your recipe Start applying transformation steps to your data. All your data preparation steps will be tracked in the recipe.'

Exploring the dataset

- Grid view - When the project has been created, you will be presented with the Grid view. This is the default view, where a sample of the data is shown in tabular format. The Grid view shows
 - Columns in the dataset
 - Data type of each column
 - Summary of the range of values that have been found
 - Statistical distribution for numerical columns

Exploring the dataset

- Schema view - The Schema view shows the schema that has been inferred from the dataset. In schema view, you can see statistics about the data values in each column. In the Schema view, you can
 - Select the checkbox next to a column to view the summary of statistics for the column values
 - Show/Hide columns
 - Rename columns
 - Change the data type of columns
 - Rearrange the column order by dragging and dropping the columns

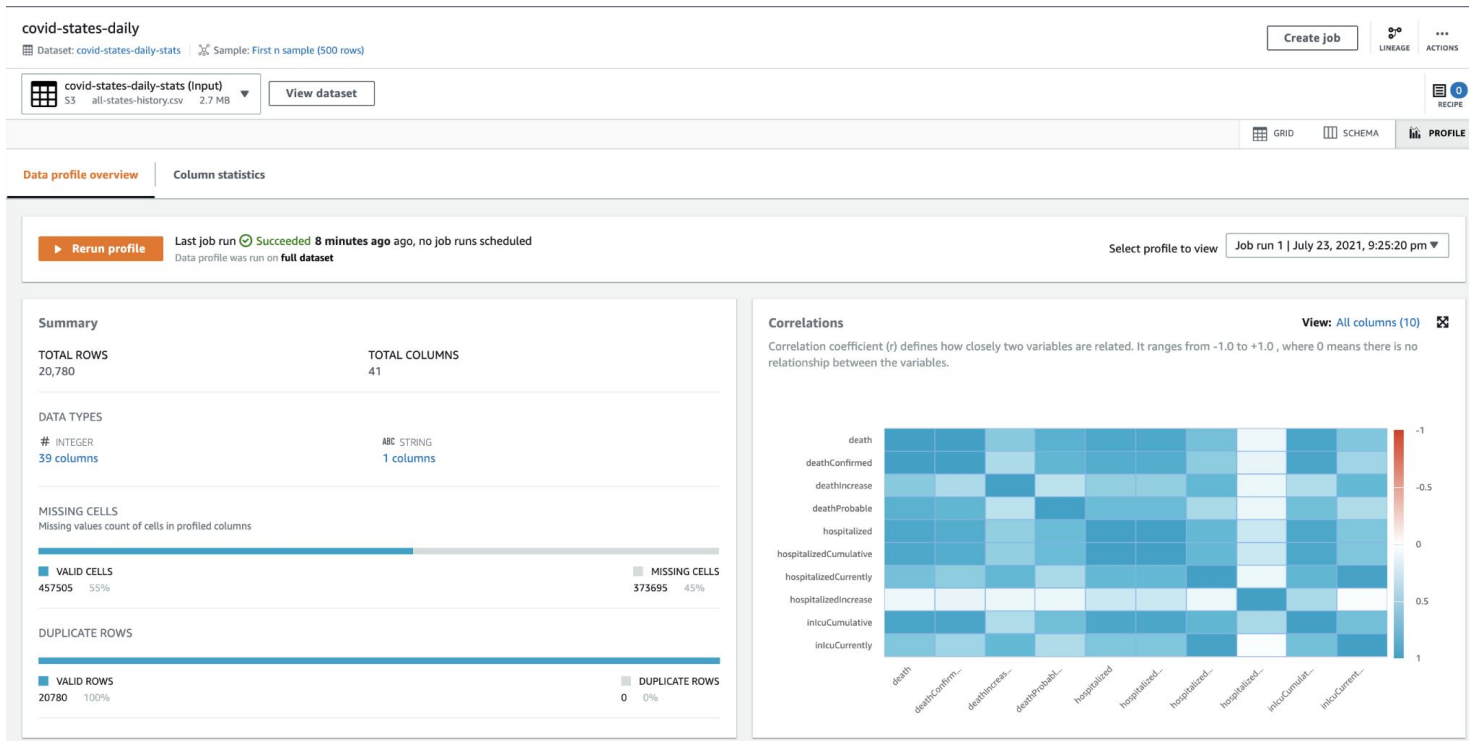

Exploring the dataset

- Profile view - In the Profile view, you can run a data profile job to examine and collect statistical summaries about the data. A data profile is an assessment in terms of structure, content, relationships, and derivation.
 - Job Name
 - Click on Run data profile
 - In the job details and job run sample panels, leave the default values
 - Job Output Setting
 - In the Job output settings section, select the S3 bucket with the name DataBrew-DataBrewLabRole--xxxxx and a folder name (eg. data-profile)
 - In the Permissions section, select the IAM role with the name databrew-lab-DataBrewLabRole-xxxxx
 - Leave all other settings as the default values
 - Click Create and run job
 - When the profile job has successfully completed, click on View data profile under Jobs from the menu on the left hand side of the DataBrew console

Exploring the dataset

- Profiling Output

Exploring the dataset

- Click on the Column statistics tab to view a column-by-column breakdown of the data values.

Preparing the dataset

- In this section, we will apply the different transformations to the dataset.
 - Rename columns
 - Change the data type of columns
 - Filled with the most frequent value
- Download the recipe from this [link](#)
- Select on Recipe from the menu on the left-hand side of the DataBrew console and click Upload Recipe

Preparing the dataset

- Provide below details
 - Recipe Name
 - Upload Recipe json script downloaded under Step 1
 - Select Create and publish recipe

Upload recipe

New recipe details

Recipe name

The recipe name must contain 1-255 characters. Valid characters are alphanumeric (A-Z, a-z, 0-9), hyphen (-), period (.), and space.

Description

Enter recipe description

Upload recipe

DataBrew recipe files can be downloaded as JSON from existing recipes and later uploaded, with or without changes

Select a file to upload

Upload a single file in json format

☒ covid-states-daily-recipe.json
File size: 1.6 KB

► **Tags - optional**

Metadata that you can define and assign to AWS resources. Each tag is a simple label consisting of a customer-defined key (name) and an optional value. Using tags can make it easier for you to manage, search for, and filter resources by purpose, owner, environment, or other criteria.

Preparing the dataset

- Now let's apply this recipe, click the project we configured now and the right side, click Import recipe
- Under Import recipe, select the recipe we configured and click Next
- Select the Append option from the right side and click Next
- Now let's validate the recipe and wait for all validation to be successful
- Once the validation is successful, click Import
- Now we will be back to the project screen and with the recipe implied on the dataset

The screenshot displays the Alteryx interface for a project named 'covid-states-daily'. The main workspace shows a data grid with columns: 'a/c year', 'a/c month', 'a/c date', 'a/c state', and '# death'. The data is filtered to show rows for the year 2021 and month of March. The right-hand pane shows the 'Recipe (9)' configuration, which includes a list of steps: 1. Change format of date to yyyy-mm-dd, 2. Change format of state to lowercase, 3. Fill missing values with 0 in deathProbable, 4. Fill missing values with 0 in hospitalized, 5. Split column on a single delimiter - in date, 6. Rename date_1 to year, 7. Rename date_2 to month, 8. Rename date_3 to date, and 9. Replace invalid values with March in month.

a/c year	a/c month	a/c date	a/c state	# death
2021	March	07	ak	305
2021	March	06	ak	305
2021	March	05	ak	305
2021	March	04	ak	305
2021	March	03	ak	305
2021	March	02	ak	302
2021	March	01	ak	300
2021	March	28	ak	290
2021	March	27	ak	290
2021	March	07	al	10148
2021	March	06	al	10149
2021	March	05	al	10122
2021	March	04	al	10094
2021	March	03	al	10029
2021	March	02	al	9991
2021	March	01	al	9931
2021	March	28	al	9929
2021	March	27	al	9930
2021	March	07	ar	5319
2021	March	06	ar	5297

Creating a DataBrew job

- Click on Jobs from the menu on the left hand side of the DataBrew console
 - On the Recipe jobs tab, click on Create job
 - Enter covid-states-daily-prep for the job name
 - Select Create a recipe job
 - Select the covid-states-daily dataset
 - Select the 'covid-states-daily-recipe'
 - In the Job output settings section, enter the S3 location s3://bucket-name/job-outputs/.
 - In the Permissions section, select the role DataBrew-DataBrewLabRole--xxxxx
 - Click Create and run job

Creating a DataBrew job

- DataBrew job is created and the job status is Running

Created recipe job "covid-states-daily-prep".

DataBrew > Jobs
